# COBUS ensuring greener aprons and financially viable solutions

POSTED ON [13 APRIL 2022 - 7:12 AM](#)

At COBUS Industries GmbH, the worldwide leading manufacturer of low-floor buses for airports, the focus is not only on the needs of the air traveller, but also on the issue of sustainability. With well thought-out technical as well as economic concepts, COBUS ensures greener aprons and financially viable solutions.

At COBUS Industries GmbH, the worldwide leading manufacturer of low-floor buses for airports, the focus is not only on the needs of the air traveller, but also on the issue of sustainability.

With well thought-out technical as well as economic concepts, COBUS ensures greener aprons and financially viable solutions.

## e.START – from diesel to electric drive

With the conversion of an existing diesel fleet into a fully electric driven one, COBUS Industries provides a unique offer for airports, ground handlers and airlines operating apron buses. The concept creates a balance between emissions, performances, and costs suitable for each customer's requirements. It supports customers to meet environmental regulations without making any compromises on quality and technology. Just one detail: LTO (Lithium Titanate Oxide) battery packs, enabling quick charges and top-ups at any time, are installed on the bus roof to preserve crucial space inside the passenger compartment. Customers can choose between three e.START packages each including electrification: full interior renovation, exterior facelift or customer specific overhaul. Geneva, Salzburg and Bristol Airport have already started to benefit from the e.START concept: More than 50 percent of the components of the existing COBUS fleet are reused and operation as well as maintenance costs are reduced considerably. Alexander Weiss, Purchasing

Infrastructure, Salzburg Airport, states: "Salzburg Airport has been focusing on sustainability for many years. The current laws and the driving profile on the apron suggested using electrically powered apron buses. The e.COBUS buses are ideally suited for the short distances on the airport apron."

Alexander Weiss, Purchasing Infrastructure, Salzburg Airport: "Salzburg Airport has been focusing on sustainability for many years. The current laws and the driving profile on the apron suggested using electrically powered apron buses. The e.COBUS buses are ideally suited for the short distances on the airport apron."

## e.COBUS

Of course, the COBUS is available – brand new – with electric drive of the latest generation of battery technology on proven bus technology for an environmentally friendly and efficient operation at airports.

## Worldwide customer service – COBUS academy

COBUS offers 1<sup>st</sup> class customer service. The COBUS service team with experienced and highly motivated field technicians offers any kind of service, like operation and maintenance training for drivers and maintenance personnel, warranty or modification works, repair works, etc., either at customer's premises or as online services.

## Smart business solutions

Challenging times demand for inventive ideas, hence COBUS Industries offers different types of financing options for its complete product range: Hire purchase, financial lease, operating lease, and short- or long-term rental. Each solution will be tailor-made according to each customer's business model.
